

-  AI-Enhanced WordP...
-  Google Site vs AI-En...
-  Github link

We are going to merge these, and then create a landing page to briefly introduce our products, user stories, and put up the link to our GitHub.

>  Statement of Work(...

Because audit 1 has been reviewed, we are ready to put it after this week's tutorial for further modifications.

-  Jira Timeline
-  Architectures

Both of these are about timelines, and the maintenance may need to be done once a week. This is mainly used to keep track of our progress, and Nicky will make weekly adjustments in the end.

- ▼  Meeting Notes
  - > Team Meeting
  - Tutorial Meeting

The Meeting notes section will be done by me, mainly to record the meeting content. And whether I should write the weekly to-do list in this section (to be decided by Nicky).

- ▼  Individual Engineeri...
-  Engineering Log -...

This is the work log of each person, written by each of us.

- ▼  Software Design
  - Front-end design
  - Backend design

In this section, the front-end should be written by Zubin and the back-end should be written by Kunlun.

The requirement is to also write some document-type files based on this. The purpose of these documents is to maintain the maintainability and iterability of our project.

These documents should provide examples of important methods as well as necessary comments.

▼ ⚠ Risk Matrix

- Issue log

In this section, our backend team believes that Nicky will mainly discover this part. We will report technical issues we find to Nicky in a timely manner, and these technical issues will be updated by Nicky.

Then we expect to have a feasibility discussion on GPTs on Thursday or Wednesday night, which will be reported by Stephanie and Nicky at that time.
